Immersive Panoramic Photography
and Digital Mapping for First Responders

▼
Lack of information in an emergency can mean the difference between life and death. **TSG 360°** bridges the unknown for first responders, providing a panoramic look at every area of a school, sports venue, museum, concert hall, hospital or resort, allowing them to react safely and efficiently.

► *First responders have a side-by-side view of what is in each room, hall or exterior space, and its physical location on the site plan.*

Piecing it Together

After a comprehensive review and verification of site and floor plans for a venue, we shoot thousands of individual images using highly specialized photography equipment. These images are “stitched” together to create 360° by 360° panoramic images that provide a complete look at what is in each room, hallway, building and campus, providing **total situational awareness.** ◀

Our service is also appreciated by anyone responsible for facilities management, architecture and site verification, as it provides a completely accessible look at the facility from a computer or tablet, saving time, money and effort.

A Seamless Partnership

The **TSG 360°** service agreement keeps the immersive mapping and panoramas from ever being out of date. Our agreement is with the school or venue, which then coordinates with local law enforcement.

When something changes at the location – for example, renovation or new construction – the program is updated seamlessly.

► *Law enforcement can hold computer simulated and live drills to practice with the system.*

Affordable & Effective

Because we are a service, there is no specialized software to buy, no expensive licensing fees to pay. Users authorized by the Client have secure access on computers, tablets and mobile phones. Our approach is user-friendly, and training is included, either remotely or on-site.

THE SOBEL GROUP, INC.

Investigation and Consulting

TSG 360° was developed by David Sobel, a retired police officer and founder of The Sobel Group, a private investigation and consulting firm based in San Diego, California.

Sobel worked for more than a decade to develop TSG 360°, which at its core is a dynamic process that links crucial information from different sources together to provide first responders with a complete “look” at a facility before ever opening a door.

Today, many of TSG’s clients are schools, universities and other high-value assets. If your school or organization is considering highly efficient and cost-effective tools for your disaster management and emergency response plans, TSG 360° can – and will – help.

Our service is built on developing custom tailored tools and deploying them with an ongoing commitment to customer service.
